

# Executive Summary – Sales Analysis Project

## Ferns & Petals (FNP) Sales Performance Dashboard

## **1. Introduction**

This Sales Analysis Project was developed to evaluate the business performance of Ferns & Petals (FNP) using interactive dashboard analytics. The objective of the project was to transform raw sales data into meaningful business insights that support strategic decision-making, operational efficiency, and revenue optimization. The dashboard provides a comprehensive overview of sales trends, customer purchasing behavior, product performance, seasonal demand, delivery efficiency, and geographic distribution of orders.

The analysis was designed using business intelligence and data visualization techniques to help management understand which products, occasions, cities, and time periods contribute most to revenue generation. It also highlights customer behavior patterns and operational performance indicators such as delivery time and order trends.

## 2. Project Objectives

The major objectives of this analysis project were:

- To analyze total sales revenue and order trends.
- To identify top-performing product categories and products.
- To evaluate customer purchasing behavior during different occasions and festivals.
- To study monthly sales trends and seasonal demand fluctuations.
- To analyze delivery performance and operational efficiency.
- To identify high-performing cities contributing maximum orders.
- To create an interactive dashboard for easy business monitoring and decision-making.

### 3. Key Business Metrics

The dashboard generated several important Key Performance Indicators (KPIs) that summarize the overall business performance.

#### Total Revenue

The business generated a total revenue of:

**₹35,20,984**

This indicates strong customer demand and healthy sales performance across different categories and occasions.

#### Average Delivery Time

The average delivery time recorded was:

**5.53 Days**

This metric helps evaluate operational efficiency and customer service performance. A delivery time close to five days suggests moderately efficient logistics management.

#### Average Revenue Per Order

The average revenue generated per order was:

**₹3,520.98**

This indicates that customers are placing moderately high-value orders, which positively impacts profitability.

#### Average Quantity Per Order

The average quantity purchased per order was:

**3.045 Units**

This shows that customers generally purchase multiple items in a single transaction, indicating effective cross-selling opportunities.

## 4. Occasion-Wise Revenue Analysis

One of the major insights from the dashboard is the impact of festivals and special occasions on revenue generation.

The analysis revealed that:

- **Anniversary occasions** generated the highest revenue among all occasions.
- **Raksha Bandhan** and **All Occasions** categories also contributed significantly.
- **Holi** and **Birthday** sales showed strong customer engagement.
- **Valentine's Day** and **Diwali** generated comparatively lower revenue than expected.

### Business Insight

Customers are highly likely to purchase personalized and emotional gifting products during relationship-based occasions such as anniversaries and Raksha Bandhan.

### Recommendation

The company should increase promotional campaigns, targeted advertisements, and personalized product offerings during these high-performing occasions to maximize revenue.

## 5. Category-Wise Revenue Analysis

The dashboard highlights which product categories contribute most to total revenue.

### Top Performing Categories

1. **Colors** – Highest Revenue Contributor
2. **Soft Toys**
3. **Sweets**
4. **Cake**
5. **Raksha Bandhan Products**

### Observations

- The “Colors” category generated over ₹10 lakh in revenue, making it the strongest category.
- Soft toys and sweets also performed exceptionally well, indicating strong demand for emotional and gifting-related products.
- Plants and mugs generated relatively lower revenue.

### Business Insight

Customers prefer emotional gifting products and festival-related items over utility products.

### Recommendation

- Increase inventory and marketing focus on high-performing categories.
- Bundle low-performing products with popular products to improve sales.
- Introduce premium variants in high-demand categories.

## 6. City-Wise Order Analysis

The analysis identified the top cities generating maximum orders.

### Top Cities by Orders

- Imphal
- Dhanbad
- Kavali
- Haridwar
- Bhavnagar
- Dibrugarh
- Guntakal

### Observations

Imphal recorded the highest number of orders, followed closely by Dhanbad and Kavali.

### Business Insight

Demand is not limited to metropolitan cities; tier-2 and tier-3 cities contribute significantly to online gifting sales.

### Recommendation

- Expand delivery infrastructure in high-performing smaller cities.
- Introduce region-specific marketing campaigns.
- Improve logistics support in emerging markets.

# 7. Monthly Revenue Trend Analysis

The monthly sales trend revealed strong seasonality in customer purchasing behavior.

## Key Findings

- Revenue peaks were observed during:
  - February
  - August
  - November
- Revenue dips occurred during:
  - January
  - April
  - July
  - December

## Business Insight

Sales spikes align with major festivals, celebrations, and gifting seasons.

## Recommendation

- Increase inventory before peak months.
- Launch seasonal promotional campaigns.
- Use predictive forecasting models for inventory planning.

## 8. Top Products by Revenue

The dashboard identified the top-performing products based on revenue generation.

### Top 5 Products

1. Magnam Set
2. Quia Gift
3. Dolores Gift
4. Harum Pack
5. Deserunt Box

### Observations

These products consistently contributed high revenue and represent customer preferences effectively.

### Business Insight

Premium gifting products attract higher customer spending.

### Recommendation

- Promote these products aggressively on the homepage and advertisements.
- Create combo offers using top-performing products.
- Maintain sufficient inventory to avoid stock shortages.

## 9. Order Time Analysis

The dashboard also analyzed the number of orders placed by hour.

### Key Findings

- Maximum orders were observed during evening and late-day hours.
- Order volume gradually declined during early morning periods.

### Business Insight

Customers prefer shopping during leisure hours after work or during evenings.

### Recommendation

- Schedule promotional notifications and advertisements during peak shopping hours.
- Optimize customer support availability during high-order periods.

## 10. Overall Conclusion

The Sales Analysis Dashboard successfully transformed raw business data into actionable insights. The project demonstrated how data analytics and visualization can help businesses understand customer behavior, optimize operations, and improve profitability.

### Major Conclusions

- Relationship-based occasions generate maximum revenue.
- Emotional gifting categories dominate customer preferences.
- Tier-2 and tier-3 cities are major contributors to online sales.
- Sales performance is highly seasonal.
- Premium products contribute significantly to revenue growth.
- Delivery efficiency plays an important role in customer satisfaction.
